Project Management Information System

Deliver Incident-Free Projects On-time, Within Budget

Schedule Monitoring

Risk Management

Quality Control

Cost Monitoring

Health & Safety Management

Document Control

RimpeX PMIS makes management of Schedule, Quality, Safety, Risk, Cost and Document easier than ever before. RimpeX uses cutting-edge technology that allows you to pin point day-to-day activities on the drawing, enabling the project team members to collaborate and take prompt action. Customisable enterprise dashboad helps the senior management to view progress and health of all projects at a bird's eyeview and can drill down to see further details.

Save man-hours

- Real-time automated reports
- Notifications & mobile apps
- Efficient data capture
- Instant communication
- Customisable dashboards
- Project forms & transmittals

Prognostic Real-Time

- Automated Risk Escalation
- 24 x 7 Surveillance
- Schedule & cost impacts
- Intelligent KPI dashboards
- Accessible anytime, anywhere
- Mobile, email & web notifications

Control Risks Increase Profits

- 4D Simulation
- Intelligent Knowledge Base
- Delay Analysis
- Claim Management
- Clash Analysis
- Enterprise Monitoring

RimpeX

"Quality is never an accident.

It is always the result of intelligent effort."

Schedules

Share

RimpeX Schedule is a cost effective method of sharing schedule updates among the project stakeholders. This system has many features similar to your scheduling software and has a control on latest schedule revisions.

Monitor

Monitoring the project schedule update is now easy. Schedule updates are only a click away, for all project team members. One can understand what are the critical items, current focus, look-ahead, resource requirements, issues, risks, etc.

Collaborate

Get the site update through smart phone apps, understand and update activity progress on mobile phone. Manage progress data between the office and the site.

Enterprise Dashboards

RimpeX Schedule enterprise dashboard allows you to monitor schedule progress of all projects in an organization on a single screen and drill down to see more details. This dashboard gives you a quick understanding of various projects and relative progress performance of different ongoing projects. RimpeX integrates with your present scheduling software updates on real-time basis on RimpeX analytics.

Project Dashboards

Control your risks,
Increase your profit

Identify

Companies that put a premium on risk management can cope with ever-increasing business risks while seizing opportunities that present themselves.

Communicate

Why Risk-management leaders Generate higher profits?

Integrating risk management into the life cycle of your projects gives you the opportunity to do two things. First, it helps you understand the implications of risk at the point of decision, rather than afterward.

Mitigate

Secondly, it allows you to move very quickly and confidently, knowing that you've anticipated the risk and are less likely to have made a mistake that could slow you down.

Capture - Report - Fix

Inspections and recording defects require your full attention on the field. Conventional method of data collection is error prone, time consuming and leaves unusable paperwork.

RimpeX is a comprehensive company wide solution that uses cutting-edge technology. It enables efficient data capture, automated reporting and instant communications via mobile app or email, which will notify your team members, to take necessary actions.

You can also analyse real-time project progress, common issues, delays and overall performance on interactive dashboards- accessible anytime , anywhere.

Mobile Apps

Studies show that, about 10% of the hazards in your workplace will be converted into near misses, 5% of the near misses into minor injuries, one third of minor injuries into major injuries and for every 10 major injuries, one life to sacrifice. If a potential hazard is monitored and removed in the first place, then the probability of converting the hazard into a near miss is very less. RimpeX hazard monitoring and controlling system helps you to minimize near misses and thus controls incidents in your projects. RimpeX HSE helps you to deliver incident free projects by making everyone a safety inspector.

Health & Safety Management System

RimpeX HSE utilizes the cutting-edge technology to inspect, report, manage and control HSE activities in large projects.

RimpeX HSE App allows you to inspect HSE activities, such as hazards, incidents, etc., directly from the construction site using your mobile phone and generate real-time reports without any delay in making official transmittals. RimpeX HSE Manager allows you to manage HSE activities from your desktop. RimpeX HSE Surveillance can monitor critical HSE activities in various projects on a 24x7 HSE live channel.
